## PROFILE

Hello ,people. This Abdallah Qapeel. I am a fresh graduate software engineer with a strong foundation in various programming languages, including Python, C++, JavaScript, and PHP. As a stack-agnostic developer, I have the flexibility to work with any technology, adapting quickly to the needs of each project. My diverse skill set allows me to approach software development with a broad perspective, ensuring that I can find the most effective solutions regardless of the tools or platforms involved. I am committed to continuous learning and growth in my field.

---

## EDUCATION

**Zagazig University - faculty of computer and informatics**                    Sep 2018 – Jul 2022
*Bachelor`s degree of information systems*

---

## PERSONAL PROJECTS

**1- Space-Invasion Python** ✍                    Jul 2020 – Aug 2020
This is a 2D game written using "pygame.py" library that python provides.
It is a game where aliens land from sky and you should kill all of them to
win the game and you are allowed to be defeated just 3 times. I have
created an .exe version from it using "pyinstaller" tool.
**Source code** ✍ **Demo** ✍

**2- MVC Laravel Core** ✍                    Sep 2021 – Oct 2021
This project where I used native PHP to write something like Laravel core
usign MVC design pattern and the project has the following features ....
- Models and Controllers and Views file structure.
- '.htaccess' file to make assets accessable by the browser.
- Routing system and middlwares.
- Simple authentication system with data validation.
- Migrations to easily manage and reuse DB schema.

**Source Code** ✍

**3- Social-Kids MERN** ✍                    Feb 2022 – Jul 2022
This is my graduation project a social media application for kids and my
role was to write the node express API for kids to enjoy the following ....
- Posts, comments, and likes.
- Realtime chat with online friends using WebSocket.
- Video, voice calls, and voice records using WebRTC.
- Searching for new friends.
- Friend requests and invitation by email.
- Posts for learning new things.

**Source Code** ✍

**4- Real-Estate MERN** 🖉                                                  May 2024 – present

Here is a real-estate marketplace web app using MERN stack and it is intended to have the following features …

- Login and register with social media accounts.
- Create their own profiles and manage their credentials.
- Home page to browse all the listing estates.
- Users can list and advertise about real-estates.
- Users can search about real-estates depending on their preference.
- Users can contact admin via whatsapp chat.
